

**In the Specification:**

Please replace the paragraph beginning on page 4, line 23 of the Specification with the following amended paragraph:

The present invention may be embodied as methods, systems, and/or computer program products. Accordingly, the present invention may be embodied in software (including firmware, resident software, micro-code, *etc.*). Furthermore, the present invention may take the form of a computer program product on a computer-usable or computer-readable storage medium having computer-usable or computer readable program code embodied in the medium for use by or in connection with an instruction execution system. In the context of this document, a computer-usable or computer-readable medium may be any medium that can contain, store, communicate, ~~propagate~~, or transport the program for use by or in connection with the instruction execution system, apparatus, or device.

Please replace the paragraph beginning on page 5, line 1 of the Specification with the following amended paragraph:

The computer-usable or computer-readable medium may be, for example but not limited to, an electronic, magnetic, optical, electromagnetic, infrared, or semiconductor system, apparatus, or device, ~~or propagation medium~~. More specific examples (a nonexhaustive list) of the computer usable or computer-readable medium would include the following: an electrical connection having one or more wires, a portable computer diskette, a random access memory (RAM), a read-only memory (ROM), an erasable programmable read-only memory (EPROM or Flash memory), an optical fiber, and a portable compact disc read-only memory (CD-ROM). ~~Note that the computer-usable or computer-readable medium could even be paper or another suitable medium upon which the program is printed, as the program can be electronically captured, via, for instance, optical scanning of the paper or other medium, then compiled, interpreted or otherwise processed in a suitable manner if necessary, and then stored in a computer memory.~~
